Capability Statement

Caring for Community & Country

✓ Consultancy ✓ Project Management ✓ Asbestos Removal ✓ Remediation

Care, Safety, Trust.

Established in 2016, AARCO Environmental Solutions provides complete asbestos removal services to the commercial, mining and resources, insurance, education, and residential sectors.

AARCO Environmental is proudly Indigenous-owned, and Supply Nation certified with a Class A Unrestricted Asbestos Removal Licence. AARCO Environmental has the expertise and capability to undertake any scope of works, including both friable and non-friable asbestos removal.

Located in Perth and Karratha (WA), AARCO Environmental services the metropolitan areas as well as greater regional Western Australia. Asbestos removal and remediation services are customised to the needs of each client.

Project Management

AARCO Environmental has the capacity to manage every project in its entirety, from the assessment and consultation stage through to removal and remediation.

We provide a consultancy service which is underpinned by extensive knowledge and experience. We prioritise open communication and responsiveness throughout every phase of the project.

In addition, our commitment to acting with integrity and honouring the trust of our clients is assured by our triple ISO certification.

Consultancy

Effective asbestos removal begins with good planning. We work closely with our clients to develop solutions that address their specific needs.

We achieve this through:

- ✓ Detailed assessments and pre-testing
- ✓ Appropriate proposals and recommendations
- ✓ Careful and safe removal
- ✓ Quality remediation
- ✓ Thorough post-removal testing and analysis

Our Services

Asbestos Removal and Disposal – Class A & B

With extensive experience spanning several years, we have established an outstanding reputation for delivering comprehensive services for both commercial and residential projects.

Implementing an integrated approach, our team actively participates in the entire process, working closely with the Independent Competent Person/ Licensed Asbestos Assessor to ensure a seamless and secure outcome.

Our capabilities include the removal of asbestos roofing, wall sheeting, fences, tiles, pipe lagging and other materials. We also specialise in environmental cleaning and removal of Asbestos Containing Dust (ACD).

Contaminated Land Management

Land and soil can become contaminated with asbestos through multiple mechanisms such as illegal burial, incorrect demolition or removal procedures, fire damage, storm damage, and contamination from former asbestos waste sites. As asbestos is a naturally occurring mineral, there are also many areas in Australia where natural contamination is found. As such, work or activities that could disturb this naturally occurring asbestos pose a risk to human health.

- ✓ Soil remediation
- ✓ Site decontamination
- ✓ Hazardous waste disposal

Commercial and Residential Demolition

AARCO is your reliable partner for all your demolition needs, whether commercial or residential. With AARCO, you can count on a smooth, hassle-free demolition experience from beginning to end.

Emergency Response and Natural Disaster Recovery

Fire or cyclone damage can create a high-risk asbestos environment. Our 24/7 team responds immediately to mitigate the effects upon our clients and the greater community.

Mould Remediation

Leveraging our competencies in asbestos removal, AARCO physically removes mould and water-damaged contaminated building materials and contents safely and in a controlled manner. With safety at the forefront of everything we do, we follow the Institute of Inspection, Cleaning and Restoration Certification (IICRC) Standard and Reference Guide for Professional Mould Remediation (S520).

Occupational Hygiene Services

At AARCO, we help protect workers and ensure they are fit for duty by providing quantitative respirator fit testing, EarFit hearing protector testing, and LABDAS Drug & Alcohol Testing from our Karratha office. We test disposable, reusable and full-face respirators to ensure effective protection against airborne hazards such as dust, silica, fumes and vapours. Whether it's one employee or an entire workforce, we deliver accurate, compliant and professional testing tailored to your workplace.

Lead Paint and Dust Removal

Structures built before the 1990s often have lead-based paint, which, when disturbed, can cause serious health risks. As a prominent contractor specializing in hazardous coating and lead paint removal, we safely and efficiently eliminate lead paint and dust. Our expertise ensures a safe environment for reoccupation, re-coating, or demolition, with all projects meeting rigorous safety and compliance standards under Workplace Health and Safety Guidelines.

Galbestos Removal

Galbestos is a type of metal cladding originally designed for industrial roofing and siding. It was made by bonding asbestos felt to galvanized steel, then sealing it with asphalt and a protective top coat.

Used widely from 1948 until production ended in 1987 due to asbestos regulations. Over time, the outer colour coating can crack and shrink, exposing the asphalt/asbestos layer beneath. Continued weathering may lead to deterioration and loss of the protective layers, potentially exposing asbestos-containing materials.

Bird Droppings/Guano Removal

Birds are ridden with numerous diseases and if copious droppings are not removed, this can attract parasites, exponentially increasing the risk of disease.

Our Difference

AARCO Environmental was established by Director, David Farrelly, who felt compelled to provide an exemplary level of safety and service in the asbestos removal industry. Now with two branches and a highly experienced team of permanent full-time staff, AARCO Environmental is a leading provider of asbestos and hazardous waste removal services.

A Focus on Safety

Safety is our business. We understand our duty of care and we adhere to strict safety protocols and regulations to ensure the well-being of our employees, clients and community. We employ full-time staff under the Building Code of Australia. We invest in our employees, ensuring they are adequately trained to perform effectively in the workplace. It is this stringent training that ensures AARCO Environmental upholds its commitment to safety.
